Capabilities Statement

Four Paws K-9 Detection, LLC, was founded by Kelly Robbins & Anna LaBarre to provide you, your company, or your agency a thorough K-9 bed bug search. Our highly trained K-9 bug detection teams are NESDCA certified and can locate the presence of odor from live bed bugs or viable eggs. We can pinpoint where you may or may not have an issue with live bed bugs. Our services are carried out in a time effective manner to save you money.

Four Paws K-9 Detection, LLC, specializes in K-9 bed bug inspections. Our teams, which consist of the dog and handler, will thoroughly search each area. The K-9 gives an alert by scratching the area where they detect odor associated with live bed bugs. The handler will then mark the area of alert and provide you with a detailed report on any of her findings. We can deliver accurate results for low thresholds of bed bugs.

"The Bed Bug Specialists"

Core Competencies

- Large scale inspections in buildings or even fleet vehicles.
- Design proactive plans that suit your needs and budget.
- Able to find bed bugs in areas that are nearly impossible for humans to inspect.

Differentiators

What makes us stand out in our industry is our dedication to training on a constant basis. We practice our services with live bed bugs every day. We also hire independent trainers to evaluate and train with us on a weekly basis. This ensures that we maintain our high quality of service. We help our communities by donating our services to churches, retreat centers, yard sales and convents. Four Paws K-9 Detection also sponsors local animal shelters for various events and golf outings.
